**BURNAID GEL**

Burnaid was first used in Emergency Rooms and 1st aid centers and is now found in the military, hospitals, ambulance and industrial workplace. Clinical trials demonstrate that Melaleuca (Tea Tree) hydrogel dressings are as effective as cold water in cooling a burn and have an increased rate of wound healing.

For **1st Degree** and **2nd Degree** Burns.
- Burnaid is in excess of 90% water trapped in a gel.
- Offers rapid cooling of the burn, minimizing tissue damage and aiding the healing process.
- Provides rapid and ongoing pain relief.
- Provides a sterile barrier against contamination and helps to prevent infection.
- Burnaid is water soluble and be rinsed off should further medical treatment be necessary.

**INSTRUCTIONS FOR USING BURNAID GEL**

**URNAID GEL**

1. Cool burn area rapidly by the application of cold water for at least 10 minutes, prior to applying Burnaid Gel.
2. Apply Burnaid gel liberally to the burn area, including blisters if present. Do not rub. Repeat application after half an hour or as required. Bandage if necessary.
3. Burnaid gel is for the first aid treatment of minor burns. Seek medical attention for the treatment of more serious burns.
4. Burnaid gel is water-soluble and can be readily rinsed off should further medical treatment be necessary.

**BURNAID DRESSING**

1. Tear or cut open pack and remove the dressing.
2. Apply immediately to burn. The dressing may be applied over burned clothing, as it will penetrate through to the burn.
3. If required, bind lightly with a bandage.
4. Seek medical attention immediately if the burn is severe, or covers a large area.
5. Burnaid gel is water-soluble and can be rinsed off should medical treatment be necessary.
